Circle the following element that is a metalloid

Argon

Germanium

Bismuth

Zinc

Hydrogen

Circle the following element that is not a transition metal

Osmium

Titanium

Gold

Radon

Copper

Circle all of the following elements that are representative elements

Sulfur

Cerium

Sodium

Aluminum

Iron

Circle the following element that is an inner transition metal

Nitrogen

Hassium

Californium

Mercury

Lithium

There are 18 groups and 7 periods in the periodic table.

Chlorine has 7 valence electrons

Groups 3 – 12 are called the transition metals.

Write the symbol of the element that is in the 3<sup>rd</sup> period and group 13 Al

Write the symbol of the element that is in the 5<sup>th</sup> period and group 11 Ag

Use the following words to match up to the descriptions below.

Representative Elements, Transition Metals, Inner Transition Metals , Periods , Groups, Lanthanide Series, Actinide Series, Metals, Non-metals, Metalloids, Alkali Metals, Alkaline Earth Metals, Halogens, Noble Gases

actinide series

all elements in this series are radioactive

non-metals

poor conductors of heat& electricity; solids are dull & brittle

representative elements

made up of groups 1,2, & 13-18

groups

vertical columns on the periodic table; all elements have similar chemical & physical properties; all elements have the same number of valence electrons

inner transition metals

made up of the Lanthanide series and the Actinide series

noble gases

do not naturally combine with other elements

metals

are ductile, malleable and lustrous

alkaline earth metals

all elements of this group have 2 valence electrons

transition metals

made up of groups 3-12

halogens

elements in this group will easily bond with an alkali metal to form a salt

lanthanide series

the "Rare Earths Elements"

periods

the row

horizontal rows, atomic number increases as you move across a

alkali metals

all elements in this group have 1 valence electron

metalloids

have the properties of both metals & non-metals
