Instructions Continued.....

CONCLUSION

Overall, instructions are supposed to be clear and concise. When a consumer buys a product and has to assemble it, they want to put it together as quick as possible. This is where the producer wants to help the consumer, by creating an assembly manual that will easily guide them through the process. This helps customers to return to buy more products if they enjoyed the process. In this case, instructions were given to build a bookshelf. A bookshelf can be looked at as something easy or not valued, but if you take a closer look it can be holding stuff of value that needs a sturdy base. So as long as products are being built correctly, they will produce the best outcome.
