ABSTRACT

Presented is a second supplement to previous lists of references. This document is a compilation of information collected by the Calculator Information Center between December 1980 and March 1982. Included are references which previously appeared on bulletins distributed by the center, plus articles from newsletters and similar less readily available sources and from non-American sources. Most references are annotated; all include a limited set of descriptors or keywords which denote the focus or contents of the reference. At the end of the listing is an index for each descriptor. Calculators: A Categorized Compilation of References

Since March 1977, the Calculator Information Center has met the dual functions of collecting and disseminating information about the use of calculators in education. This document lists references collected by the Center between December 1980 and March 1982, supplementing two previous compilations (Suydam, 1979, 1980). The majority of these references have appeared on Reference Bulletins distributed by the Center. Two additional types of materials cited here did not appear in those bulletins:

- (1) Articles from sources not readily available to wide audiences.
- (2) Articles and other documents from non-American sources.

 No claim to comprehensiveness is made: readers are encouraged to send additional references to the Center. Omitted are approximately 350 references pertaining to applications which seem too specialized in intent for use in schools.

The alphabetized listing of references includes, in parentheses, a limited set of descriptors or keywords which denote the focus or contents of the references. At the end of the listing is an index to help the reader locate documents of interest. However, some descriptors which could have been applied to a particular reference might not be listed. Such omissions generally occurred because the descriptor did not come to mind as the reference was scanned. It is suggested that readers might add their own notes of references appropriate in each category.

In the majority of instances, the references are annotated. In a small percentage of cases, however, no annotation is included; this occurred most often because the document was not available at the Center. The descriptors should reflect what is known about the contents of such documents, as indicated by the title.

It is hoped that this compilation will be of aid to teachers, to researchers, and to others who need and want references on calculators.

<u>Calculators: A Categorized Compilation of References</u> (Compiled December 1980-March 1982)

Abdelsamad, Omer Elfaroug Hamza. Improved Student Problem-Solving Procedure with the Calculator as Validated by Mathematics Experts. (University of Denver, 1980.) <u>Dissertation Abstracts International</u> 41A: 3462-3463; February 1981.

Problem-solving strategies were designated for each of the four steps in a problem-solving procedure (14, 32, 4, and 10 strategies, respectively). A questionnaire designed to determine the effective use of calculators in problem solving was completed by 53 mathematics teachers. The calculator was found to be effective for 13 strategies. Overall, the calculator was more effective for carrying out the plan than for understanding the problem.

Twenty-seven third and fourth grade students with learning disabilities were randomly assigned to one of three experimental groups: a group using four-function calculators, a group using preprogrammed feedback calculators, or a control group. The two calculator groups met for 20 minutes per day for 20 school days outside regular curriculum time. They used the calculators to practice basic facts. The four-function calculator group's performance was significantly better than the other two.

(Elementary (grades 3-4), Learning disabilities, Remedial, Research)

Allen, Steven. Math Skills Requirement of the Financial Industries.

Journal of the CUNY Mathematics Discussion Group 7, 1980.

A vice-president of Chase Manhattan Bank discusses the need for calculator skills, and a calculator approach to algebra.

Antipov, I. N. The Basic Calculation Methods by Pocket Calculator Elektronika B3-18A. Moscow: Vishave Shkola, 1980.

(Activities)

Ash, Peter and Robinson, Edward. <u>Basic College Mathematics: A Calculator Approach</u>. Reading, Massachusetts: Addison-Wesley, 1981.

This book is designed for a college mathematics course, with calculator use integrated.

(Basic mathematics, College, Scientific calculators)

Bailey, John F. Electronic Calculators and the Multiply Handicapped. Educational Research 23: 65-66; November 1980.

Training physically and mentally handicapped students ages 8-16 to use a calculator is described and the positive outcomes of this study are cited.

(Calculator keys, Curriculum, Desk calculators, Elementary, Four-function calculators, Handicapped, Junior high, Research, Secondary)

Bailey, P. A. Programmable Calculating Machines. <u>Mathematics Teaching</u> 66: 30-31; March 1974.

Important features that need to be considered when selecting a program-mable calculator for classroom use are discussed. In addition, ten possible uses of programmable calculators in secondary schools are suggested.

(Programmable calculators, Secondary, Selection)

Earelski, Paul M. Use of a Photocopied Slide Rule to Complement Limited Function Calculators. <u>Journal of Chemical Education</u> 58: 718; September 1981.

The use of a slide rule is suggested to complement a four-function calculator. An inexpensive method of making a slide rule with photocopied scales is described.

(Recommendations)

Behr, Merlyn J. and Wheeler, Margariete Montague. The Calculator for Concept Formation: A Clinical Status Study. <u>Journal for Research in Mathematics Education</u> 12: 323-338; November 1981.

Teaching young school children to use the "=" key as a counter button is explored.

(Elementary (k-1), Four-function calculators, Research (survey))

Bentley, Ernest (Ed.). <u>Programmable Calculators and Minicomputers in Agriculture: A Symposium Exploring Computerized Decision-Making Aids.</u> 1980. ERIC: ED 206 272.

Uses of calculators (and computers) in agriculture and agricultural education are presented.

(Agriculture)

Bestgen, Barbara J. Calculators - Taking the First Step. Arithmetic Teacher 29: 34-37; September 1981.

A step-by-step plan for introducing calculators in grades one through six is outlined. It includes a sequence of activities.

(Activities, Attitudes, Elementary (grades 1-6))

Birnbaum, Ian. Powers and Roots on a Calculator. Mathematics Teaching 94: 48; March 1981.

Methods of calculating any power or root of a number using only the x^2 and \sqrt{x} keys are illustrated.

(Calculator keys, Powers, Roots, Scientific calculators, Secondary)

Bitter, Gary. Calculator Corner: Dividing with the Calculator. <u>Teacher</u> 98: 101; January 1981.

Several activities are presented that illustrate how calculators can help children understand division concepts. Remainders, estimating, and figuring averages are also discussed.

(Activities, Calculator keys, Elementary, Four-function calculators, Teachers)

Bitter, Gary. Calculator Corner: Place Value Activities. <u>Teacher</u> 98: 98; February 1981.

Jsing the calculator to reinforce place value concepts is described. (Activities, Elementary, Place value, Teachers)

Bitter, Gary. Calculator Corner: Computing Percentages with the Calculator.

<u>Teacher</u> 98: 89; March 1981.

This article describes how the calculator can be used to find the total sale price of an item (including tax) and annual or compund interest on a savings account.

(Activities, Calculator keys, Consumer applications, Elementary, Junior high, Teachers)

Bitter, Gary. Five, Six Math is Kicks When You Seven, Eight Calculate! Instructor 91: 130-133; September 1981.

A step-by-step guide to help teach elementary children how to use a calculator is presented.

(Activities, Elementary)

Block, G. H. Dyscalculia and the Mini-calculator - The ALP Program.

<u>Academic-Therapy</u> 10: 175-181; November 1980.

Successful calculator experiences in the clinical APL program for elementary disabled learners are described along with a method for dealing with fractions, in which decimal answers are converted to equivalent fractions.

(Curriculum, Decimals, Elementary, Fractions, Learning disabilities, Recommendations, Remedial)

Blume, Glendon W. The Rationality of a -- An Application to Calculators. MATYC Journal 15: 55-59; Winter 1981.

Using the y^x (or 10^x) key on a calculator for determining the rationality of a^b is investigated. Comments on rational approximations displayed for an irrational number are also included.

(Calculator keys, Exponents, Integers, Powers, Rational numbers, Secondary)

Boltanskii, V. G. School and Pocket Calculator. <u>Matematika v Shkole</u> 2: 46-49; 1979.

(Activities, Elementary, Secondary)

Bone, Dorothea. Making Calculators Count. <u>Independent School</u> 40: 45-47; May 1981.

A brief history of the development and use of the hand-held calculator is presented. Recommendations for general classroom use are made.

(Recommendations)

Brey, Rita Kolmesh. Effects of Problem Solving Activities and Calculators on Problem Solving and Computation in Grade Four. (The University of Michigan, 1980.) <u>Dissertation Abstracts International</u> 41A: 1914; November 1980.

Studied were the effects of a planned sequence of problem-solving activities and use of calculators on problem-solving and computational performance. Calculator use did not decrease computational skills. The calculator was useful if the problems were within the scope of the child's paper-and-pencil ability. Those who had used calculators were less afraid than others to attempt difficult problems.

Campbell, Stafford. The Yachtsman's Guide to Calculator Navigation. New York: Ziff-Davis, 1980.

Suggestions for using the calculator as a navigational tool are given. (Naval applications, Scientific calculators)

Carmony, Lowell. Analysis of a Truck Driver's Square Root Algorithm.

Mathematics Teacher 74: 144-149; February 1981.

An algorithm for approximating square roots is analyzed. One small section deals with using a calculator to generate a table.

(Algebra, Algorithms, Calculus Roots, Secondary)

Carpenter, Thomas P.; Corbitt, Mary Kay; Kepner, Henry S., Jr.; Lindquist, Mary Montgomery; and Reys, Robert E. Calculators and Computers. In Results from the Second Mathematics Assessment of the National Assessment of Educational Progress. Reston, Virginia: National Council of Teachers of Mathematics, 1981. Pp. 115-132.

This chapter presents NAEP data on how students performed on different types of exercises and problems when they used calculators.

(Achievement, Attitudes, Elementary (age 9), Four-function calculators, Junior high (age 13), Mixed operations. Problem solving, Related (computers), Research, Secondary (age 17)

Carpenter, Thomas P.; Corbitt, Mary Kay; Kepner, Henry S., Jr.; Montgomery, Mary Lindquist; and Reys, Robert E. Calculators in Testing Situations: Results and Implications from National Assessment. Arithmetic Teacher 23: 34-37; January 1981.

The 1977-78 NAEP mathematics assessment provided Anformation about performance on routine computation and problem solving when calculators were available. The data indicated that calculators are widely accessible to scudents at ages 9, 13, and 17. They performed routine computation better with the use of a calculator.

(Achievement, Elementary (age 9), Four-function calculators, Junior high (age 13), Mixed operations, Problem solving, Research)

Carter, L. R. and Huzan, E. <u>Teach Yourself the Pocket Calculator</u>. New York: David Mckay, 1979.

Applications of the scientific calculator in science and business, featuring popular equation and calculator techniques, is presented.

Conner, Totsye J. An Investigation of the Use of Hand-Held Calculators in Grades K-5 at P. K. Yonge Laboratory School. <u>National Association of Laboratory Schools Journal</u> 15-18; November 1979.

Two classes each of kindergarten, second-, and fourth-grade students (n = 161) were designated experimental groups. First-, third-, and fifth-grade students (n = 164), who were tested the previous year using the Metropolitan Achievement Test Form F (MAT), served as the control group. The six teachers of the experimental groups participated in a workshop on calculator use and materials. During the school year, these teachers made decisions about specific activities and how frequently calculators were used. The ratio of calculators to students in the experimental classes was one to two. No significant differences in achievement between the experimental and control groups were found at the second- and fourth-grade levels. However, the kindergarten group using calculators scored significantly higher on the MAT than the group not using calculators.

Edens, Helen S. Calculators in the First Grade: How Should They be Used?

<u>Virginia Mathematics Teacher</u> 7: 11-14; February 1981.

See Edens, 1981.

(Achievement, Attitudes, Elementary (grade 1), Four-function calculators, Research, Teachers (in-service))

Edens, Helen Smith. Effects of the Use of Calculators on Mathematics Achievement of First Grade Students. Unpublished doctoral dissertation, University of Virginia, 1981.

In grade 1, four calculator classes and two non-calculator classes were randomly identified. Teachers in one calculator group were given inservice education on using calculators. All groups used the same worksheets for 30 minutes each day during the 6-week study. The non-calculator group scored significantly higher on the posttest of mathematics objectives and on mathematical concepts than did the calculator group. Students whose teachers had the in-service work scored significantly higher on concepts. Teacher attitudes were more positive toward the use of calculators after the experimental period.

(Achievement, Attitudes, Elementary (grade 1), Four-function calculators, Research, Teachers (in-service))

Hayes, Robert L. Calculators and Curriculum Change. <u>Australian Mathematics Teacher</u> 36: 21; March 1980.

Reasons for revising and updating mathematics teaching procedures and curriculum to incorporate the use of calculators are presented.

(Curriculum, Roles)

Hector, Judith H. and Frandsen, Henry. Calculator Algorithms for Fractions with Community College Students. <u>Journal for Research in Mathematics</u>
<u>Education</u> 12: 349-355; November 1981.

Community college students were randomly assigned to groups using one of three methods for teaching fraction computation. The first method was the use of the conventional algorithm. The second method was a combination of the algorithms and calculators for whole number calculation. In the third method each fraction was converted to a decimal on a calculator before any operations were performed. Although there were significant pretest to posttest gains in all three groups, the calculator group did not show significant gains compared to the other two. However, significant differences between the pre- and posttest scores were found.

A method for using the binomial theorem to approximate multiplication is presented.

(Algebra)

Levin, Eugene M. Binomial Baseball. <u>Two-Year College Mathematics Journal</u> 12: 260-266; September 1981.

A program to play a simulated baseball game is presented. The statistics from the game agree well with the expected values computed from the negative binomial distribution.

(Games, Programmable calculators, Statistics)

Levin, James A. Estimation Techniques for Arithmetic: Everyday Math and Mathematics Instruction. Educational Studies in Mathematics 12: 421-434; November 1981.

Estimation techniques are discussed and a series of mental estimation procedures are presented. The procedures are based on the concepts of measurement and real numbers rather than on counting and integers. Techniques for teaching these procedures are described.

(Estimation, Mixed operations)

Lewis, Janice and Hoover, H. D. The Effect on Pupil Performance of Using Hand-held Calculators on Standardized Mathematics Achievement Tests.

April 1981. ERIC: ED 204 152.

Students in grades 4 and 8 (n = 539) received brief instruction on using a calculator. Half of the students at each grade level completed mathematics subtests of the Iowa Test of Basic Skills using a calculator as an option. The same tests were given a second time without calculators. The opposite procedure was used for the other half of the students. Rates of completion at both grade levels were much lower on problemsolving and computation subtests when a calculator was available. However, computation scores increased significantly at both grade levels when calculators were used.

Martin, Ann Ackerman. The Effect of the Use of the Calculator on Mathematics Anxiety in College Algebra Students. (The University of Oklahoma, 1980.) Dissertation Abstracts International 41A: 2485-2486; December 1980.

No significant differences were found in mathematics anxiety between students using or not using a calculator, or between male and female students using calculators.

(Algebra, Anxiety, College, Research, Scientific calculators)

Martin, Randy L.; Lowry, David P.; Nicholls, Albert W.; Schumacher Joyce E.; Egan, Gerald V.; and Burton, Robert O., Jr. <u>Use of Programmable Calculators for Depreciation Calculations</u>. Circular 119. West Virginia: West Virginia University Agricultural and Forestry Experiment Station, 1981.

(Finance, Programmable calculators)

Martino, J. P. A Revolution in Your Hand - Past is Only Prologue for the Hand-Held Calculator. <u>Futurist</u> 14: 59; 1980.

The impact of calculators in the past and in the future is discussed. (Future (technology), Roles, Status report)

Mayer, Richard E. and Bayman, Piraye. Analysis of Students' Intuitions About the Operation of Electronic Calculators. April 1981, ERIC: ED 201 503.

Thirty-three college students who were novice users of calculators were compared to 33 computer science majors who were expert calculator users. For each of 88 items (e.g., 2 + 3 +), students were asked to write down the number that would be in the calculator display after the last key was pressed. Experts were found to be more consistent than novices. Students differed greatly on when they thought an expression would be evaluated, the order in which a chain of calculations was evaluated, and whether the display would be incremented.

(Algorithms, Calculator logic, College, Research, Solution methods)

McCrae, Barry. Calculators and Numeracy. <u>Australian Mathematics Teacher</u> 35: 24-25; November 1979.

Support is given for the calculator as a key to the development of numeracy rather than a threat.

Rule, Robert Loren. The Effect of Hand Held Calculators on Learning About: Functions, Functional Notation, Graphing, Function Composition, and Inverse Functions. (Iowa State University, 1980.) <u>Dissertation Abstracts International</u> 41A: 3866; March 1981.

Two basic mathematics classes were randomly assigned to be experimental groups (n = 126), while one class was the control group (n = 38). In the experimental groups, the calculator was used in demonstrations and discussions to aid learning about functions. In the control group, calculator use was allowed but not required or encouraged. No significant differences in achievement were found between groups.

(Achievement, College, Functions, Research, Units)

Rynone, William John. An Investigation of the Impact of Specialized Training in the Use of the Hand-Held Calculator on Selected Engineering Technology Students. (New York University, 1980.) <u>Dissertation Abstracts International</u> 41A: 5014; June 1981.

One experimental and one control group from each of two schools offering electronics programs within a major department of engineering technology studies were used. The experimental groups were exposed to formalized training in the use of hand-held calculators early in their first semester, using a calculator training manual. At the completion of the training period a test was administered. The findings of the study indicated formalized training resulted in superior test performance for the experimental group.

Steinback, Myriam. Calculator-Based Curricular Modules for Two-Year College Remedial Mathematics Courses. (Columbia University, 1980.)

Dissertation Abstracts International 41A: 1454; October 1980.

A one-term calculator-based course in mathematics for junior college students needing remediation was designed. The calculator-based curricular modules helped some students in problem solving. The calculator seemed to be highly motivational, and gave students confidence to proceed in areas of mathematics they had never before explored.

(Achievement, Algebra, College, Course description, Problem solving, Remedial, Research, Scientific calculators)

Stewart, James Thomson. Using the Hand-Held Calculator as a Computing Aid for Instruction in Word-Problem Solving with Elementary Grade Students. (University of Illinois at Urbana-Champaign, 1980.) <u>Dissertation Abstracts International</u> 41A: 4634; May 1981.

Students in grades 4-6 (n = 146) were divided into four groups: calculator with special or standard materials and non-calculator with special or standard materials. Following daily instruction consisting of 10 problems to solve, a posttest of worded problem-solving ability was given. Students in the calculator/special materials group scored significantly lower than students in other groups. This group, however, completed the instructional materials in a significantly shorter average time than other groups.

(Status report)

Suydam, Marilyn N. (Ed.). <u>Investigations with Calculators: Abstracts and Critical Analyses of Research. Supplement 3.</u> Columbus, Ohio: Calculator Information Center, February 1982. ERIC: SE 036 233.

Twelve research reports on calculator use are abstracted and critiqued by mathematics educators.

(References, Research (review))

Suydam, Marilyn N. Update on Research on Problem Solving: Implications for Classroom Teaching. Arithmetic Teacher 29: 56-60; February 1982.

The effects of calculator use on problem-solving strategies and achievement in problem solving are discussed.

(Problem solving, Research)

Swartz, Cliff. True Confessions (Using Hand Calculators to Solve Problems in Physics). Physics Teacher 19: 158; March 1981.

This editorial makes the point that finding formulas in textbooks, substituting numerical values, and computing answers with a calculator can lead to learning a substantial amount of physics.

(Physics, Roles, Scientific calculators, Secondary)

Szetela, Walter. Calculator and Paper and Pencil Methods on Problem Solving Tests in Grades Five to Seven. Vancouver, Canada: University of British Columbia, April 1981.

Students in grades 5-7 (n = 116) were given calculators for use in mathematics classes. They were randomly assigned to one of two modes of completing the problem-solving posttest: using calculators or using paper and pencil. In a second section of the posttest, the groups were reversed, so that all students took a test in both modes. Three of eight comparisons of correct solutions significantly favored the calculator mode of problem solving. On measures of problems attempted and methods correct, all differences were nonsignificant except three favoring the calculator mode.

(Elementary (grades 5-6), Four-function calculators, Junior high (grade 7), Problem solving, Research)

Szetela, Walter. A Study of the Effects of Using Calculators for Problem Solving in Grades Three, Five, Seven, and Eight. Vancouver, Canada: University of British Columbia, April 1981.

Students in grades 3, 5, 7, and 8 were randomly assigned to calculator or non-calculator instruction. At each grade level one teacher taught both groups using regular materials and texts, supplemented by additional materials for the calculator groups. On tests of computational skills and problem solving on which all students used only paper and pencil, there were no significant differences. However, on a problem-solving test where calculators were used, the seventh- and eighth-grade groups using calculators scored significantly higher than paper-and-pencil groups.

(Elementary (grades 3, 5), Four-function calculators, Junior high (grades 7, 8), Problem solving, Research)

Szetela, Walter. The Effects of Using Hand Calculators in the Learning of Mathematics in Grades Three to Eight. Vancouver, Canada: University of British Columbia, April 1981. ERIC: ED 201 502.

This report contains the two previously cited studies, one on using calculators in grades 5 to 7 (1981a) and one on their use in grades 3, 5, 7, and 8 (1981b).

(Elementary (grades 3, 5, 6), Four-function calculators, Junior high (grades 7,8), Problem solving, Research)

Thompson, Ian. Types of Error and Checking Strategies in Calculator Work. Mathematics in School 10: 16-18; September 1981.

The types of error which may be made in calculator computations are discussed. Appropriate checking techniques for calculator usage are presented.

(Checking, Estimation)

Timnick, Lois. Electronic Bullies. <u>Psychology Today</u> 16: 10-15; February 1982.

The willingness of students to accept unreasonable answers from calculators is discussed.

(Estimation, Junior high (grades 7-9), Research, Secondary (grades 10-12)

Tokar, E. and Ruggles, D. Using Pocket Calculators to Improve the Quality of Teacher-Made Tests. Educational Technology 21: 51-52; February 1981.

A procedure is presented for determining test reliability on a calculator. (Scientific calculators, Teachers (in-service), Testing)

Usiskin, Karen. <u>Ideas for Calculator Activities for Junior High School</u>. Glenview, Illinois: Scott, Foresman, October 26, 1979.

A collection of sixty-five short calculator-activities appropriate for students in grades five through nine is presented.

(Activities, Elementary (grades 5-6), Junior high (grades 7-9))

van den Brink, F. J. Zakrekenmachine (een kwalitatief onderwijsonderzoek).

Nieunne Wiskrant 1: 43-48; September 1981.

Research on the use of calculators by kindergarten and elementary children is described.

(Elementary (grades k-6), Recommendations, Research)

Volk, William. Engineering Statistics with a Programmable Calculator. New York: McGraw-Hill, 1982.

(College, Engineering, Programmable calculators, Statistics)

Watson, F. R. <u>Basic Arithmetic with a Calculator (BAC pac)</u>. Keele, England: University of Keele, 1980. Available from ERIC/SMEAC (1200 Chambers Road, Columbus, Ohio 43212).

This material was produced for use with low-achieving students aged 13 to 15. It is designed to be cut up to form 16 small "topic booklets". (Low achievers, Secondary)

Weaver, J. Fred. Calculators. In <u>Mathematics Education Research: Implications for the 80's</u> (Elizabeth Fennema, Ed.). Alexandria, Virginia: Association for Supervision and Curriculum Development, 1981. Pp. 154-168.

This chapter is a somewhat subjective distellation of the essence of consequential research findings to date on calculator use in school settings, the implications of such findings for classroom instruction, and some indication of research directions that need to be taken during the 1980s. It supports the NCTM recommendations on calculator use.

(Elementary, Junior high, Recommendations, Research (summary), Roles, Secondary)

Weaver, J. Fred. Calculators and Unary Operations. School Science and Mathematics 81: 239-248; March 1981.

Calculator algorithms are used to illustrate and suggest ways in which calculators can facilitate unary operations at the pre-algebra level.

(Algorithms, Calculator keys, Functions, Iteration, Junior high)

Weaver, J. F. On Design Differences of Some RPN Calculators. MATYC Journal 15: 190-193; Fall 1981.

Two different designs of RPN calculators are compared: in one the contents of the T register are always retained; in the other, the contents of the T register are lost whenever the problem involves a stack of more than three levels.

(Calculator logic, Calculator memory)

Exploration of the Use of "Programmed" Calculators in Remedial and Special

Needs Math Programs at the Secondary Level. Final Report of Project,

September 14, 1978, to June 15, 1979. New Brunswick, New Jersey:

Middlesex County Vocational and Technical High Schools, 1979. ERIC:

ED 193 429.

This project investigated the effect of placing one programmable calculator in each of five remedial mathematics labs and one in a special needs mathematics classroom. Teachers recommended continued use of the calculator, and regarded it as an effective motivator. Students' attitudes were positive toward use of the calculator, and they experienced "feelings of accomplishment in mathematics."

(Attitudes, Learning disabilities, Programmable calculators, Remedial, Research, Secondary, Technical mathematics)

Los Angeles Unified School District. <u>Calculator Concepts</u>, <u>Student Practice Cards</u>. Los Angeles: Instructional Planning Division, 1976.

Suggested practice exercises for students in the use of calculators. Many lessons require that students look for patterns and write rules for those observed. Recommended for grades seven through nine.

(Junior high (grades 7-9), Pattern searches, Worksheets)

Los Angeles Unified School District. <u>Using a Calculator: Improving Computational Skills and Understanding Mathematical Concepts</u>. Los Angeles: Instructional Planning Division, 1975.

Describes the use of the four-function calculator and reviews basic number sequences and operations. Recommended for grades four through six.
